Professional Summary:

Generative AI and Frontend Engineer with 3.6+ years of IT experience in developing AI-powered applications, enterprise solutions, and modern web applications. Skilled in Large Language Models (LLMs), Prompt Engineering, Retrieval-Augmented Generation (RAG) concepts, Python, FastAPI, React.js, JavaScript, and REST APIs. Experienced in building AI-integrated applications, conversational AI workflows, semantic search solutions, and scalable frontend applications. Proficient in integrating AI services with business applications to deliver intelligent, user-centric solutions. Strong analytical and problem-solving abilities with a passion for Generative AI, intelligent automation, and emerging AI technologies. Committed to continuous learning and developing innovative AI-driven solutions that enhance business productivity and user experience.

Educational Qualification:

B.Tech in Computer Sciences — Narayana Engineering College, Gudur (Affiliated to JNTUA, A.P.) | 2022

Work Experience:

- Worked as a Senior Associate Engineer in Concentrix, Bangalore from October 2022 - October 2025.
- Working as Application Engineer - Wagzen Technologies, Bangalore from Nov 2025 – Apr 2026

Technical Expertise:

- **Back End** - Python (FastAPI, Flask)
- **Database** - MySQL, FAISS, ChromaDB
- **Generative AI & LLMs** - RAG, Prompt Engineering, LLM Applications, GPT-4, LLaMA, Hugging Face, Transformers, Embeddings
- **Frameworks** - LangChain, AutoGen, CrewAI, AI Agents, Agent Design, Tool Calling, Memory Management
- **Vector Databases** - ChromaDB, FAISS
- **Cloud & AI Services** - Microsoft Azure (Azure OpenAI, Azure AI Services), AWS, AWS Bedrock
- **Data & Integration** - REST APIs, API Integration, Data Pipelines
- **Visualization & Deployment** - Streamlit, Plotly, Chart.js, Docker, Git/GitHub

Professional Experience :

Project 4#

Client: Wagzen Technologies

Project: Admin & CRM Operations Management Platform

Role: Application Engineer (AI Solutions Development)

Environment: React.js, JavaScript (ES6), HTML5, CSS3, Python, FastAPI, REST APIs, JSON, MySQL, OpenAI API, Git, Agile

Description:

Developed a centralized Admin and CRM platform for managing customer support operations, service orders, payments, partner activities, and customer communications across Housecallers mobile applications. The platform enabled support teams to monitor service requests, manage order lifecycles, track payment transactions, resolve customer issues, and improve operational efficiency. Integrated AI-powered workflows to assist support teams with automated responses, ticket summaries, and customer interaction insights.

Roles & Responsibilities:

- Developed responsive admin and CRM dashboards using React.js, JavaScript, HTML5, and CSS3.
- Built modules for customer management, order tracking, payment monitoring, and support operations.
- Integrated REST APIs for real-time synchronization of customer, partner, order, and payment data.
- Developed interfaces for handling customer queries, service requests, order status updates, and issue resolution workflows.
- Utilized Python and FastAPI services for backend integrations, data processing, and workflow automation.
- Integrated AI-powered features for ticket summarization, support assistance, and automated customer communication workflows.
- Participated in debugging, testing, performance optimization, and Agile development activities.

Key Highlights:

- Developed Admin and CRM tools supporting customer service and operational teams.
- Experience managing order processing, payment workflows, and customer support operations.
- Hands-on experience with React.js, REST APIs, Python, and FastAPI integrations.
- Worked on Generative AI-powered support automation and customer communication workflows.
- Experience building scalable business applications serving customer, partner, and operational teams.

Project 3#

Project: AI Talent Matching & Recruitment Assistant Platform

Role: Generative AI Engineer

Environment: Python, FastAPI, Generative AI, Large Language Models (LLMs), Prompt Engineering, LangChain, React.js, JavaScript (ES6), HTML5, CSS3, REST APIs, JSON, RAG Concepts, FAISS, ChromaDB, Git, Agile

Description:

Developed an AI-powered recruitment assistant platform designed to automate resume analysis, candidate screening, and job matching using Generative AI and semantic search techniques. The application leveraged LLM-powered workflows, prompt engineering, and intelligent candidate matching to streamline recruitment

processes and improve hiring efficiency. Contributed to AI integration, frontend development, API orchestration, and intelligent recommendation workflows.

Roles & Responsibilities:

- Developed responsive and interactive user interfaces using React.js, JavaScript (ES6), HTML5, and CSS3.
- Integrated Generative AI functionalities for resume parsing, candidate evaluation, profile summarization, and job matching workflows.
- Designed and optimized prompt engineering strategies to improve response quality, candidate recommendations, and recruitment insights.
- Worked with LangChain-based workflows for prompt orchestration, AI interactions, and contextual response generation.
- Developed and integrated REST APIs using FastAPI to enable seamless communication between frontend applications and AI services.
- Implemented AI-powered workflows for candidate screening, profile analysis, and intelligent recommendation generation.
- Participated in testing, debugging, performance optimization, and continuous improvement of AI-powered application features.
- Collaborated within Agile development teams, contributing to sprint planning, task execution, and iterative product enhancements.
- Maintained version control and collaborative development practices using Git.

Key Highlights:

- Experience developing AI-powered recruitment and talent-matching solutions.
- Hands-on experience with LLM workflows, Prompt Engineering, and Generative AI integrations.
- Worked with LangChain, FastAPI, semantic search, and vector retrieval concepts.
- Built AI-enabled frontend applications using React.js and REST API integrations.
- Experience integrating AI services with enterprise applications and business workflows.
- Strong understanding of RAG concepts, structured data processing, and intelligent recommendation systems.

Project 2#

Client: Convergys-QA

Project: AI-Driven QA Automation & Test Management Portal

Role: Generative AI Integration & Frontend Developer

Environment: React.js, JavaScript (ES6), HTML5, CSS3, Redux Toolkit, Python, OpenAI API, Prompt Engineering, REST APIs, JSON, Git, Agile

Description:

Developed an AI-powered QA automation and test management platform to streamline test case tracking, defect management, and testing workflows. Integrated Generative AI capabilities to generate automated test summaries, defect insights, and intelligent recommendations, improving QA productivity and decision-making.

Roles & Responsibilities:

- Developed responsive UI components using React.js, JavaScript, HTML5, and CSS3.
- Built reusable frontend modules using React Hooks and Redux Toolkit for efficient state management.
- Integrated Generative AI features for automated test summaries and defect analysis.
- Designed prompt engineering workflows to improve AI-generated outputs for QA use cases.
- Developed and consumed REST APIs for frontend and AI service integration.
- Implemented real-time dashboards for monitoring testing activities and defect trends.
- Utilized Python for data processing and API response handling.
- Participated in debugging, testing, performance optimization, and Agile development activities.

Key Highlights:

- Experience integrating Generative AI features into enterprise QA applications.
 - Strong frontend development expertise using React.js and Redux Toolkit.
 - Hands-on experience with Prompt Engineering, OpenAI-based workflows, and REST APIs.
 - Experience building AI-powered dashboards and workflow automation solutions.
-

Project 1#

Client: Convergys (Internal Project)

Project: Intelligent Resume Screening & Candidate Support Portal

Role: Frontend Developer & AI Integration Engineer

Environment: Python, FastAPI, OpenAI API, Prompt Engineering, HTML5, CSS3, JavaScript, REST APIs, FAISS, Git, Agile

Description: Developed a Generative AI-powered application for automated resume screening and support query handling. The platform leveraged LLM-based workflows, prompt engineering, and semantic search techniques to generate candidate summaries, intelligent responses, and recruitment insights, improving operational efficiency and user experience.

Roles & Responsibilities:

- Developed responsive frontend interfaces using HTML5, CSS3, and JavaScript.
- Integrated OpenAI-based Generative AI features for resume analysis, query handling, and automated response generation.
- Designed prompt engineering workflows to improve AI response quality and relevance.
- Utilized basic Python scripting for data processing, API response handling, and supporting AI-powered workflow automation.
- Developed FastAPI-based services and REST APIs for AI workflow integration and data processing.
- Implemented semantic search and vector retrieval concepts using FAISS for intelligent information retrieval.
- Integrated frontend applications with AI-powered backend services for real-time interactions.
- Participated in testing, debugging, and performance optimization of AI-driven features.

- Collaborated in Agile development activities and maintained code using Git.

Key Highlights:

- Frontend-focused development for AI-powered recruitment and support applications.
 - Experience integrating OpenAI-based features and prompt-driven workflows.
 - Basic Python scripting experience for data processing and AI workflow support.
 - Hands-on experience with REST APIs, FastAPI, and AI service integrations.
 - Utilized AI agents and modern AI-assisted development tools to improve productivity and development efficiency.
-

FYI: I have no constraints regarding work location and am comfortable working from home or office. I am also willing to relocate to any location in alignment with business needs.
